Invisible Foreground Music Speaker  
Whole-house Audio System

Super-clean and luxury home delicately filled with the audiophile-quality sound & music system

We are specialized in “*Invisible Speaker*” solutions from Stealth Acoustics, USA, that you could 100% build into your ceiling (and walls). You can paint, wall-paper, laminate over the front side of the speakers so the speakers become truly invisible after installation while providing superb sound quality and make your home a musical place without disturbing the home interior design.

Together with the high quality audio equipments including amplifier and music server, we could offer one of the best background music and whole-house audio systems you could find in the market. Our service starts from providing consultation, proposing the system design up till installation.
