Invisible Stereo Speaker

Suitable for Small Area with Limited
Space for Installation

Music while you are in the kitchen or in the bathroom? Why not!

We are specialized in “*Invisible Speaker*” solutions from Stealth Acoustics, USA, that you could 100% build into your ceiling (and walls). You can paint, wall-paper, laminate over the front side of the speakers so the speakers become truly invisible after installation while providing superb sound quality and make your small space much more pleasant and filled with music. No more worries that you will spill the water or the oil from your frying pan to damage your bluetooth speaker as our speaker is fully invisibly built up inside the ceiling! 1 speaker will do the job to cover your entire small area.

Hearing is Believing! Come visit us at our showroom
